"info": {
  "description": "This application programming interface (API) allows you to explore the way
candidates and committees fund their campaigns. \n\n The Federal Election Commission (FEC) API
is a RESTful web service supporting full-text and field-specific searches on FEC data. [Bulk
downloads](https://www.fec.gov/data/advanced/?tab=bulk-data) are available on the current
site. Information is tied to the underlying forms by file ID and image ID. Data are updated
nightly. \n\n There are a lot of data, and a good place to start is to use search to find
interesting candidates and committees. Then, you can use their IDs to find report or line item
details with the other endpoints. If you are interested in individual donors, check out
contributor information in the `/schedule_a/` endpoints. \n\n \u003Cp class=\\"body\\"
id=\\"getting_started_head\\" \u003EGetting started with the openFEC
API\u003C/p\u003E\n\n If you would like to use the FEC's API programmatically,
you can sign up for your own API key using our form. Alternatively, you can still try out our
API without an API key by using the web interface and using DEMO_KEY. Note that when you use

```

Pretty-print

```
(https://github.com/fecgov/FEC/blob/master/TERMS-OF-SERVICE.md) and [Acceptable use policy]
(https://github.com/fecgov/FEC/blob/master/ACCEPTABLE-USE-POLICY.md). \n\n Signing up for an
API key will enable you to place up to 1,000 calls an hour. Each call is limited to 100
results per page. You can email questions, comments or a request to get a key for 7,200 calls
an hour (120 calls per minute) to \u003Ca
href=\"mailto:APIinfo@fec.gov\" \u003EAPIinfo@fec.gov \u003C/a \u003E. You can also ask questions
and discuss the data in a community led [group](https://groups.google.com/forum/#!forum/fec-
data). \n\n The model definitions and schema are available at [/swagger](/swagger/). This is
useful for making wrappers and exploring the data. \n\n A few restrictions limit the way you
can use FEC data. For example, you can't use contributor lists for commercial purposes or to
solicit donations. [Learn more here](https://www.fec.gov/updates/sale-or-use-contributor-
information/). \n\n [Inspect our source code](https://github.com/fecgov/openFEC). We welcome
issues and pull requests! \n\n \u003Cp \u003E \u003Cbr \u003E \u003Cp \u003E \u003Ch2

    "description": "\nEach report represents the summary information from Form 3, Form 3X
and Form 3P.\nThese reports have key statistics that illuminate the financial status of a
given committee.\nThings like cash on hand, debts owed by committee, total receipts, and total
disbursements\nare especially helpful for understanding a committee's financial
dealings.\n\nBy default, this endpoint includes both amended and final versions of each
report. To restrict\nto only the final versions of each report, use `is_amended=false`; to
retrieve only reports that\nhave been amended, use `is_amended=true`.\n\nSeveral different
reporting structures exist, depending on the type of organization that\nsubmits financial
information. To see an example of these reporting requirements,\nlook at the summary and
detailed summary pages of Form 3, Form 3X, and Form 3P.\n\nDISCLAIMER: The field labels
contained within this resource are subject to change. We are attempting to succinctly\nlabel
these fields while conveying clear meaning to ensure accessibility for all users.\n",

},
"/v1/schedules/schedule_a/": {
  "get": {
    "description": "\nThis description is for both `/schedules/schedule_a/` and
`/schedules/schedule_a/{sub_id}/`. \n\nThis endpoint provides itemized receipts. Schedule A
records describe itemized receipts, including contributions from individuals. If you are
interested in contributions from an individual, use the `/schedules/schedule_a/` endpoint. For
a more complete description of all Schedule A records visit [About receipts data]
(https://www.fec.gov/campaign-finance-data/about-campaign-finance-data/about-receipts-data/).
If you are interested in our `is_individual` methodology visit our [methodology page]
(https://www.fec.gov/campaign-finance-data/about-campaign-finance-data/methodology/). \nThe
`/schedules/schedule_a/` endpoint is not paginated by page number. This endpoint uses keyset
pagination to improve query performance and these indices are required to properly page
through this large dataset. To request the next page, you should append the values found in
the `last_indexes` object from pagination to the URL of your last request as additional
parameters. \nFor example, when sorting by `contribution_receipt_date`, you might receive a
page of results with the two scenarios of following pagination information:\n\ncase
#1:\n``\npagination: {\n  pages: 2152643,\n  per_page: 20,\n  is_count_exact: False,\n
count: 43052850,\n  last_indexes: {\n    last_index: \"230880619\", \n
last_contribution_receipt_date: \"2014-01-01\" \n  } \n} \n``\n\n\ncase #2
(results which include contribution_receipt_date = NULL):\n\n``\npagination: {\n  pages:
2152644,\n  per_page: 20,\n  count: 43052850,\n  is_count_exact: False,\n
last_indexes: {\n    last_index: \"230880639\", \n    sort_null_only: True \n
} \n} \n``\n\nTo fetch the next page of sorted results, append `last_index=230880619` and
`last_contribution_receipt_date=2014-01-01` to the URL and when reaching
`contribution_receipt_date=NULL`, append `last_index=230880639` and `sort_null_only=True`. We
strongly advise paging through these results using sort indices. The default sort is acending
by `contribution_receipt_date` (`deprecated`, will be descending). If you do not page using

```

Pretty-print

/schedule_a/ may return many records. For large result sets, the record counts round in the pagination object are approximate; you will need to page through the records until no records are returned.\n\nTo avoid throwing the \"out of range\" exception on the last page, one recommendation is to use total count and `per\_page` to control the traverse loop of results.\n\nThe `/schedules/schedule\_a/{sub\_id}/` endpoint returns a single transaction, but it does include a pagination object class. Please ignore the information in that object class.\n\n",

"/v1/schedules/schedule_a/{sub_id}": {
  "get": {
    "description": "\nThis description is for both `/schedules/schedule_a/` and
`/schedules/schedule_a/{sub_id}/`. \n\nThis endpoint provides itemized receipts. Schedule A
records describe itemized receipts, including contributions from individuals. If you are
interested in contributions from an individual, use the `/schedules/schedule_a/` endpoint. For
a more complete description of all Schedule A records visit [About receipts data]
(https://www.fec.gov/campaign-finance-data/about-campaign-finance-data/about-receipts-data/).
If you are interested in our `is_individual` methodology visit our [methodology page]
(https://www.fec.gov/campaign-finance-data/about-campaign-finance-data/methodology/). \nThe
`/schedules/schedule_a/` endpoint is not paginated by page number. This endpoint uses keyset
pagination to improve query performance and these indices are required to properly page
through this large dataset. To request the next page, you should append the values found in
the `last_indexes` object from pagination to the URL of your last request as additional
parameters. \nFor example, when sorting by `contribution_receipt_date`, you might receive a
page of results with the two scenarios of following pagination information:\n\ncase
#1:\n``\npagination: {\n  pages: 2152643,\n  per_page: 20,\n  is_count_exact: False,\n
count: 43052850,\n  last_indexes: {\n    last_index: \"230880619\", \n
last_contribution_receipt_date: \"2014-01-01\" \n  } \n} \n``\n\u003Cbr/\u003E\ncase #2
(results which include contribution_receipt_date = NULL):\n\n``\npagination: {\n  pages:
2152644,\n  per_page: 20,\n  count: 43052850,\n  is_count_exact: False,\n
last_indexes: {\n    last_index: \"230880639\", \n    sort_null_only: True \n
} \n} \n``\n\nTo fetch the next page of sorted results, append `last_index=230880619` and
`last_contribution_receipt_date=2014-01-01` to the URL and when reaching
`contribution_receipt_date=NULL`, append `last_index=230880639` and `sort_null_only=True`. We
strongly advise paging through these results using sort indices. The default sort is ascending
by `contribution_receipt_date` (`deprecated`, will be descending). If you do not page using
sort indices, some transactions may be unintentionally filtered out. \n\nCalls to `/schedules
/schedule_a/` may return many records. For large result sets, the record counts found in the
pagination object are approximate; you will need to page through the records until no records
are returned. \n\nTo avoid throwing the `\"out of range\"` exception on the last page, one
recommendation is to use total count and `per_page` to control the traverse loop of
results. \n\nThe `/schedules/schedule_a/{sub_id}/` endpoint returns a single transaction, but
it does include a pagination object class. Please ignore the information in that object
class. \n\n",

"/v1/schedules/schedule_b/": {
  "get": {
    "description": "\nSchedule B filings describe itemized disbursements. This
data\nexplains how committees and other filers spend their money. These figures are\nreported
as part of forms F3, F3X and F3P.\n\nThe data are divided in two-year periods, called
`two_year_transaction_period`, which\nis derived from the `report_year` submitted of the
corresponding form. If no value is supplied, the results will\ndefault to the most recent two-
year period that is named after the ending,\neven-numbered year.\n\nDue to the large quantity
of Schedule B filings, this endpoint is not paginated by\npage number. Instead, you can
request the next page of results by adding the values in\nthe `last_indexes` object from
`pagination` to the URL of your last request. For\nexample, when sorting by
`disbursement_date`, you might receive a page of\nresults with the following pagination
information:\n\n```\npagination: {\n  pages: 965191,\n  per_page: 20,\n  count:
19303814,\n  is_count_exact: False,\n  last_indexes: {\n    last_index:
\n"230906248"\n  }\n}\n```\n\nTo fetch the
next page of sorted results, append `last_index=230906248` and\n`last_disbursement_date=2014-
07-04` to the URL. We strongly advise paging through\nthese results by using the sort indices
(defaults to sort by disbursement date, e.g.\n`last_disbursement_date`), otherwise some
resources may be unintentionally filtered out.\nThis resource uses keyset pagination to
improve query performance\nand these indices are required to properly page through this large
dataset.\n\nNote: because the Schedule B data includes many records, counts for\nlarge result
sets are approximate; you will want to page through the records until no records are
returned.\n",

"/v1/schedules/schedule_b/{sub_id}": {
  "get": {
    "description": "\nSchedule B filings describe itemized disbursements. This
data\nexplains how committees and other filers spend their money. These figures are\nreported
as part of forms F3, F3X and F3P.\n\nThe data are divided in two-year periods, called
`two_year_transaction_period`, which\nis derived from the `report_year` submitted of the
corresponding form. If no value is supplied, the results will\ndefault to the most recent two-
year period that is named after the ending,\neven-numbered year.\n\nDue to the large quantity
of Schedule B filings, this endpoint is not paginated by\npage number. Instead, you can
request the next page of results by adding the values in\nthe `last_indexes` object from
`pagination` to the URL of your last request. For\nexample, when sorting by
`disbursement_date`, you might receive a page of\nresults with the following pagination
information:\n\n```\npagination: {\n  pages: 965191,\n  per_page: 20,\n  count:
19303814,\n  is_count_exact: False,\n  last_indexes: {\n    last_index:
`230906248`,\n    last_disbursement_date: `2014-07-04`\n  }\n}\n```\n\nTo fetch the
next page of sorted results, append `last_index=230906248` and\n`last_disbursement_date=2014-
07-04` to the URL. We strongly advise paging through\nthese results by using the sort indices
(defaults to sort by disbursement date, e.g.\n`last_disbursement_date`), otherwise some
resources may be unintentionally filtered out.\nThis resource uses keyset pagination to
improve query performance\nand these indices are required to properly page through this large
dataset.\n\nNote: because the Schedule B data includes many records, counts for\nlarge result
sets are approximate; you will want to page through the records until no records are
returned.\n",

expenditures. For example, if a super PAC bought ads on TV to oppose a federal candidate, each ad purchase would be recorded here with the expenditure amount, name and id of the candidate, and whether the ad supported or opposed the candidate. An independent expenditure is an expenditure for a communication "expressly advocating the election or defeat of a clearly identified candidate that is not made in cooperation, consultation, or concert with, nor at the request or suggestion of, a candidate, a candidate's authorized committee, or their agents, or a political party or its agents." Aggregates by candidate do not include 24 and 48 hour reports. This ensures we don't double count expenditures and the totals are more accurate. You can still find the information from 24 and 48 hour reports in `/schedule/schedule_e/`. Due to the large quantity of Schedule E filings, this endpoint is not paginated by page number. Instead, you can request the next page of results by adding the values in the `'last_indexes'` object from `'pagination'` to the URL of your last request. For example, when sorting by `'expenditure_amount'`, you might receive a page of results with the following pagination information:

```
{
  "count": 152623,
  "is_count_exact": true,
  "last_indexes": {
    "last_index": 3023037,
    "last_expenditure_amount": -17348.5,
    "per_page": 20,
    "pages": 7632
  }
}
```

To fetch the next page of sorted results, append `'last_index=3023037'` and `'last_expenditure_amount=''` to the URL. We strongly advise paging through these results by using the sort indices (defaults to sort by disbursement date, e.g. `'last_disbursement_date'`), otherwise some resources may be unintentionally filtered out. This resource uses keyset pagination to improve query performance and these indices are required to properly page through this large dataset. Note: because the Schedule E data includes many records, counts for large result sets are approximate; you will want to page through the records until no records are returned.

    "description": "Candidate endpoints give you access to information about the people running for office. This information is organized by `candidate_id`. If you're unfamiliar with candidate IDs, using `/candidates/search/` will help you locate a particular candidate. \n\n Officially, a candidate is an individual seeking nomination for election to a federal office. People become candidates when they (or agents working on their behalf) raise contributions or make expenditures that exceed $5,000. \n\n The candidate endpoints primarily use data from FEC registration [Form 1](https://www.fec.gov/resources/cms-content/documents/fecfrm1.pdf) for committee information and [Form 2](https://www.fec.gov/resources/cms-content/documents/fecfrm2.pdf) for candidate information.",
    "name": "candidate"
  },
  {

```

Pretty-print

characteristics and relationships with candidates can change over time. \n\n You might want to use filters or search endpoints to find the committee you're looking for. Then you can use other committee endpoints to explore information about the committee that interests you. \n\n Financial information is organized by `committee\_id`, so finding the committee you're interested in will lead you to more granular financial information. \n\n The committee endpoints include all FEC filers, even if they aren't registered as a committee. \n\n Officially, committees include the committees and organizations that file with the FEC. Several different types of organizations file financial reports with the FEC: \n\n *Campaign committees authorized by particular candidates to raise and spend funds in their campaigns. Non-party committees (e.g., PACs), some of which may be sponsored by corporations, unions, trade or membership groups, etc. Political party committees at the national, state, and local levels. Groups and individuals making only independent expenditures Corporations, unions, and other organizations making internal communications* \n\n The committee endpoints primarily use data from FEC registration Form 1 and Form 2.",

    "description": "Fetch key information about a committee's Form 3, Form 3X, Form 13, or Form 3P financial reports. \n\n Most committees are required to summarize their financial activity in each filing; those summaries are included in these files. Generally, committees file reports on a quarterly or monthly basis, but some must also submit a report 12 days before primary elections. Therefore, during the primary season, the period covered by this file may be different for different committees. These totals also incorporate any changes made by committees, if any report covering the period is amended. \n\n Information is made available on the API as soon as it's processed. Keep in mind, complex paper filings take longer to process. \n\n The financial endpoints use data from FEC [form 5] (https://www.fec.gov/pdf/forms/fecfrm5.pdf), for independent expeditors; or the summary and detailed summary pages of the FEC [Form 3](https://www.fec.gov/pdf/forms/fecfrm3.pdf), for House and Senate committees; [Form 3X](https://www.fec.gov/pdf/forms/fecfrm3x.pdf), for PACs and parties; [Form 13](https://www.fec.gov/pdf/forms/fecfrm13.pdf) for inaugural committees; and [Form 3P](https://www.fec.gov/pdf/forms/fecfrm3p.pdf), for presidential committees.",
